Delaval, Jan RE: RE: 09/674,716

Good morning Jan,

The correct USSN is 09/674,716. Sorry about that. How are you doing otherwise? Neon.

Jan,

Please search peptides of SEQ ID NO: 3, 5, 7, 9, 11, 13(1, 2, 17, 18 against commercial and interference databases.

Thanks, Neon Art unit 1644 Mail 9E12 Tel 308-4844

/note="Vector: pSPORTI; Site_1: SalI; Site_2: NotI; This
clone is among a rearrayed set of 15,247 clones from 11
embryo cDNA libraries (including preimplantation stage
embryos from unfertilized egg to blastocyst, embryonic
part of ET.5 embryos, extraembryonic part of ET.5 embryos
, and EL2.5 female mesonephros/gonad) and one newborn
ovary cDNA library. Average insert size 1.5 kb. All
source libraries are cloned unfdirectionally with Oligo(dT
)-Not primers. References include: (1) Genome-wide

The invention provides altered antibodies, such as chimeric or humanised antibodies (see AA23474 and AA234748), which comprise sufficient of the amino acid sequences of the Cll light and heavy chain complementarity determining regions (see AA73254-59) for render them capable of binding to the CD23 type II molecule expressed on haman therapy, for the treatment of arthritis, copial formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, Sjogren's syndrome, allergic asthma, intrinsic asthma, acte asthmatic exacerbation, rhinitis, casthma, intrinsic asthma, acte asthmatic exacerbation, rhinitis, (particularly chronic bronchitis) or diabetes (particularly type I diabetes), and B-cell malignancles (claimed). They are also useful distantion the binding and various ligands and

The present invention describes a method of treating cancer associated with prostate stem cell antigen (PSCA) by administering an antibody which selectively binds to PSCA and inhibits the growth of the cancer cells. The PSCA gene is found on human chromosome 8q24.2. The invention provides the human and murine PSCA protein and coding sequences, which can be used not only in the treatment of, but also in detection and prognosis of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                          Antibodies binding to prostate stem cell antigen inhibit the growth of cancer cells and are used to detect and treat prostate, pancreatic or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to new antibodies that specifically bind a novel prostate stem cell antigen (BSCA), which is widely over-expressed across all stages of prostate cancer. The antibodies of the invention are useful to kill tumour cells expressing PSCA and as PSCA expression is observed in prostate tumour cells and in other human cancers,

particularly bladder and pancreatic carcinomas, the antibodies are useful therapeutically to treat these diseases. In particular, monoclonal artibodies can be administered to subjects suffering from RSCA-associated cancers, e.g. prostate, bladder or pancreatic cancer or metastatic prostate, bladder or pancreatic cancer, to inhibit the cancer and prolong the subject's life. The antibodies can be combined with a therapeutic agent in immunoconjugates useful to treat subjects suffering from malignant diseases, characterised by cells having PSCA antigen on the call surface e.g. cancers, by killing the cells. The antibodies and immunoconjugates may also be included with a carrier in pharmaceutical compositions useful to kill human cells expressing PSCA antigen on the cancer. The antibodies are also useful diagnostically to detect cancers, especially prostate cancer, to isolate prostate cancer cells compounds, assist in identification of rare genes associated with prostate cancer, and to isolate and purify PSCA and PSCA homologues. The present nucleic acid sequence encodes the mouse heavy chain variable commain region of the PSCA monoclonal antibody 2H9 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antigen bound by antibody ING-I (produced by hybridoma cell line ATCC HB 9812). The chimeric antibodies also have an antigen-binding site that competitively inhibits the binding of antibody ING-I, and mediate complement-dependent cytolysis of target cells or antibody-dependent callular cytotxicity to target cells. The chimeric antibodies can be used for therapeutic purposes in the treatment of human cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ï
                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes the heavy chain of the antibody ABX-CXL. The invention relates to a monoclonal antibody (MAb) with an isotype that fixes complement and a variable region that binds to the epitope on CD147 bound by the IgM MAb ABX-CBL, providing that the antibody is not CBL1. The MAb can selectively Kill activated T-cells, activated B-cells or resting or activated monocytes. The products and methods can be used for treating diseases involving activated T-cells or B-cells or monocytes, e.g. graft versus host disease (GVHD), organ transplant rejection diseases (e.g. renal transplant, ocular transplant), cancers of the blood (e.g. leukaemia's and lymphomas) and

The sequence is used in the prodn. of a chimeric antibody mol. comprising two light chains and two heavy chains, each having a constant region (human) and a variable region (murine) having specificity to an antigen bound by murine monoclonal antibody (MAD) Br-3. The chimeric antibodies can be used for any purpose for which the original murine MABs can be used, with the advantage that they are more compatible with the human body. They are esp. used for

                                                                                                                                                                     Gaps
      A cDNA clone (AAT43437) codes for the heavy chain variable region (AAW06512) of mouse monoclonal antibody (Mab) Br-3, and extends from the end of the oligo-dc tail to the UH3-cH1 junction. It was obtd. from a Br-3 hybridoma cDNA library by screening with a mouse IgG1 expressed on the surface of human lung, breast, colon and ovary carcinomas, but not on most normal adult tissues. Light chain and heavy chain variable region (see also AAT4344-43) sequences can be used with human constant region sequences to express mouse-human chimneric antibodies in transformed host cells. The antibodies have treatment and diagnosis of human cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunotoxin; heavy chain; light chain; variable region; antibody;

An immunotoxin (given in AAR70827) comprises the heavy (VH) and light chain (VL) variable regions of anti-lens epithelium IgG3 MAb 4197X linked to ricin-A. cDNAs encoding the VL and VH regions of 4197X (AAQ85387-88, respectively) were obtained from hybridoma mRNA, amplified by PCK, and engineered for inclusion in the immunotoxin construct (AAQ85386).

                                                                                                                                                                                               This sequence encodes the heavy chain variable (V) region of a mouse monoclonal antibody (MAb), 1C11, specific for an HIV-1 viral antigen. It is used in the construction of a chimeric MAb comprising heavy and light chains having murine V regions and human c regions. The chimeric MAbs are more effective than murine MAb comprising have an increased compatibility in humans. The heavy and light chain V-regions are joined by manipularing their respective joining (J) regions, to generate restriction enzyme recognition sites. The chimeric MAbs can be used as immunoconjugates, in association with e.g. toxins for HIV treatment. They can also be used in diagnosis of HIV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a branched mucin type synthetic glycolipid. A gene fragment encoding the V region of the heavy forbin of an antibody recognising the protein encoded by the present sequence is claimed. The antibody gene fragment is useful for the development of cancer treatments and diagnosing agents.

The present sequence may be used in the activation of new ketone prodrug compounds containing active agents. The ketone derivatives are useful as carriters for antitumnur agents such as cytotoxic agents, where the antitumour agent is a microtubule stabilising agent such as paciltaxel, epothiloric such as doxorubich or its therapeutically active analogue or an anthracycline antitumour agent as a microtubule stabilising agent such as advorubich or its therapeutically active analogue. The ketone derivatives are useful for targeted drug delivery.

The inactive molecules by retro-Michael reaction. The antibody has a cative molecules by retro-Michael reaction. The antibody has bifunctional activity and specifically immunoreacts with cell surface antigen of a target cell. The active ingredients can be mixed buffering agent to enhance the effectiveness and activity of the buffering agent to enhance the effectiveness and activity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAAGTGAAGCTTGAGGAGTCTGGAGGAGGCTTGGTGCAACCTGGAGGATCCATGAAACTC 146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Primers JO2, JO3, JO4, JO14 and VHIBACK (AAQ62740-Q62744) were all used to prepare cDNAs that encode the BrE-3 mouse Ig variable domains. The amplified V-regions lacked constant regions so as to produce less immunogenic polypeptides. A hybrid polypeptide was prepared using human constant regions with the murine V regions. The chimeric polypeptide retained the binding affinity of BrE-3 for human milk fat globule.
Immunoglobulin variable domain; primer; polymerase chain reaction; chimeric antibody; human milk fat globule; BrE-3 VH-chain; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric human-murine polypeptide(s) specific for human mammary fat globule antigen – for imaging, diagnosing and treating neoplasia, with less undesirable immunogenic response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         64.9%; Score 269.4; DB 15; Length 403; 85.3%; Pred.                                    Immunoglobulin variable domain; primer; polymerase chain reaction; chimeric antibody; human milk fat globule; BrE-3 VH-chain; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primers JO2, JO3, JO4, JO14 and VHIBACK (AAQ62765-Q62769) were all used to prepare cDNAs that encode the BrE-3 mouse Ig variable domains. The amplified V-regions lacked constant regions so as to produce less immunogenic polypeptides. A hybrid polypeptide was prepared using human constant regions with the muxine V regions. The chimeric polypeptide estained the binding affinity of BrE-3 for human milk fat globule.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 14, P.
